

Valet Tray

Print out your template.

Ensure you print it out at 100% scale.

You can either use one of my templates to cut out your tray or just cut out a square.

If making a custom size, the last page of the pdf has corner templates which you can use to punch your holes in the right spots.

If using the full template, punching the holes before you cut is easier.

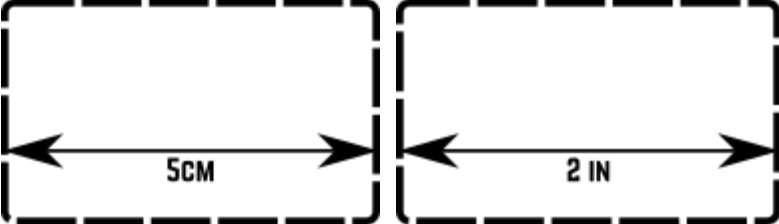

Once cut out, add your maker's mark to the middle if you choose.

Bevel/sand/burnish edges.

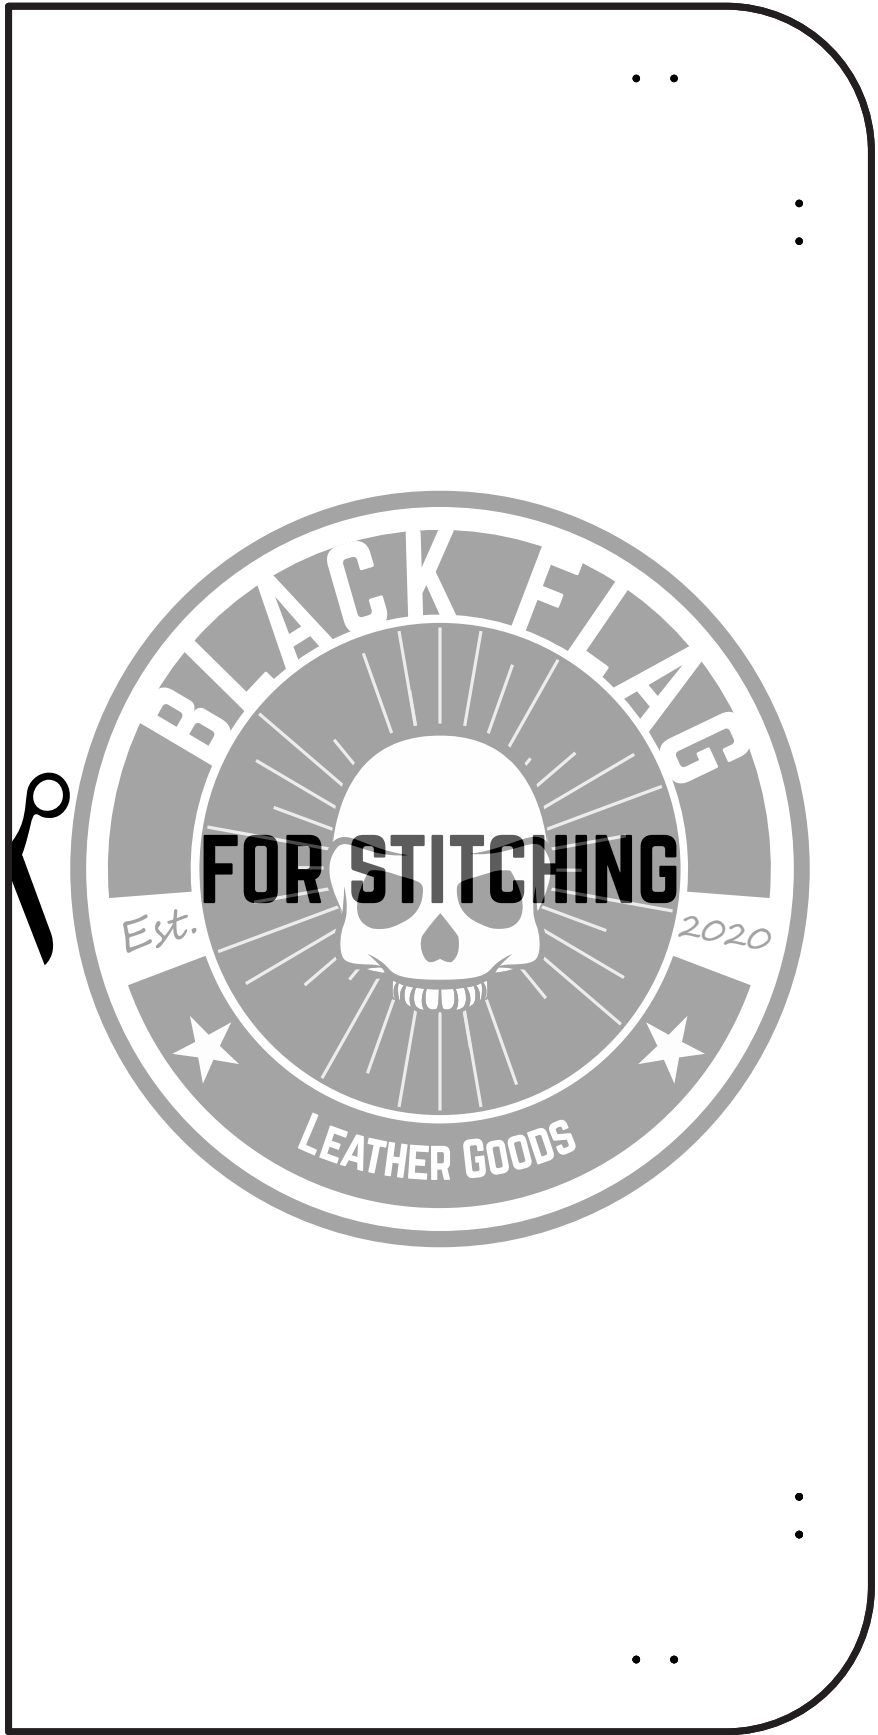

Stitch/snap/rivet the corners together.

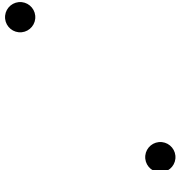

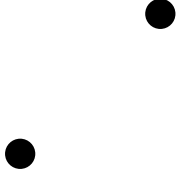

That's it.

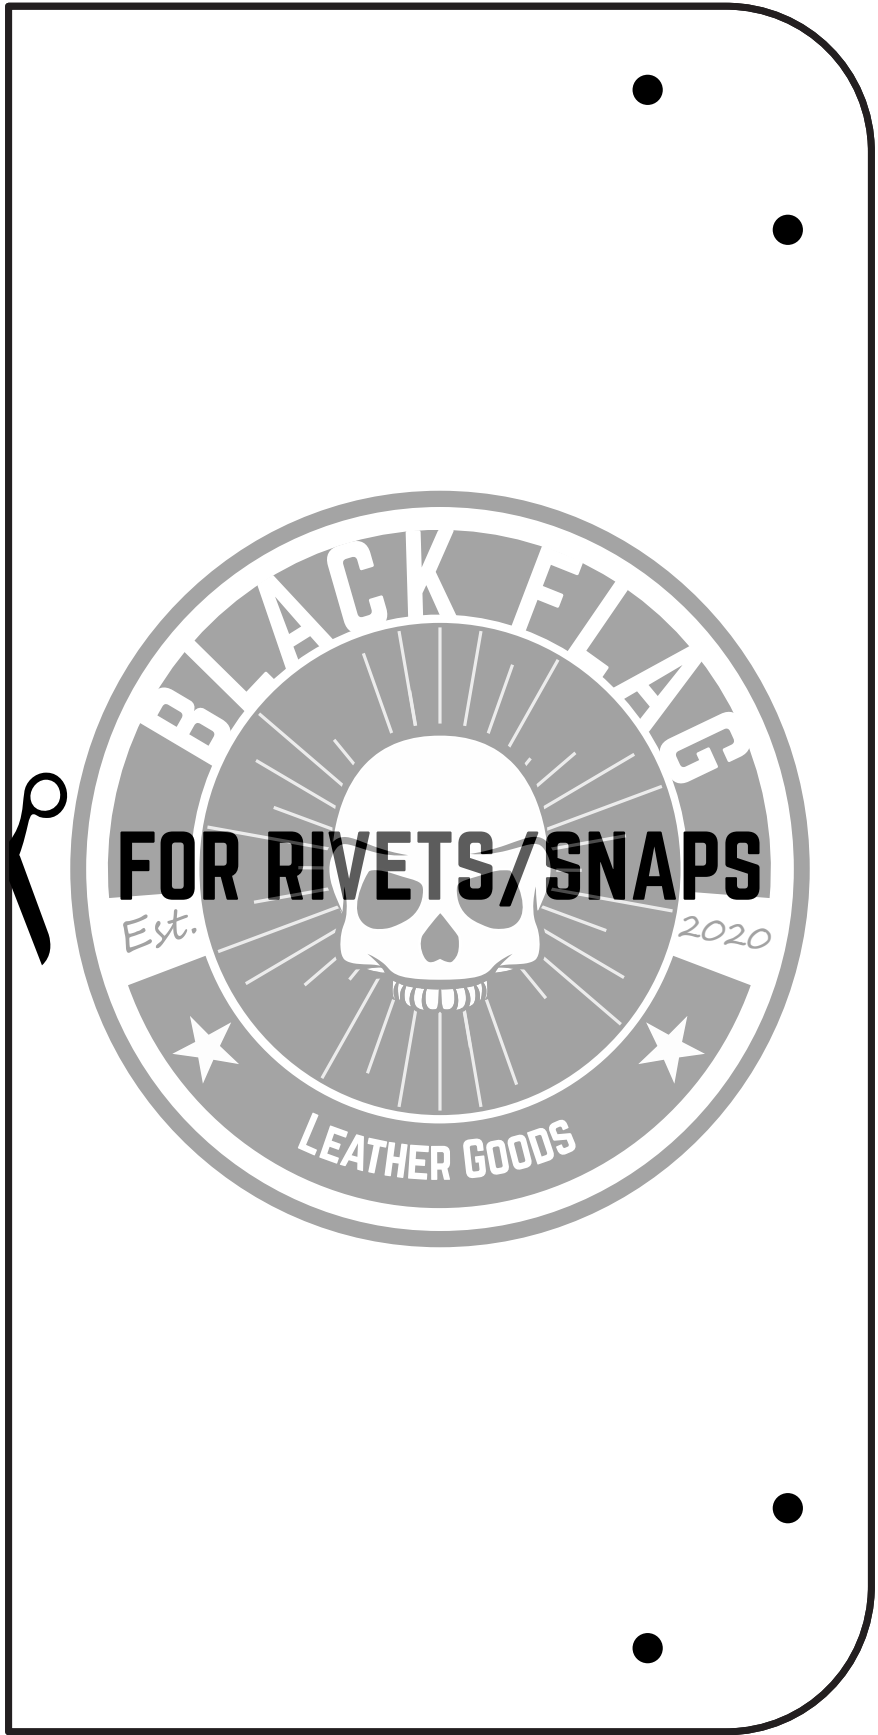

When printing, make sure to print the true size. Measure below to ensure the image hasn't been scaled:

FOR RIVETS/SNAPS
